

MSc Communication Systems Engineering

Programme Specification

Primary Purpose

Course management and quality assurance.

Secondary Purpose

Detailed information for students, staff and employers. Current students should refer to the related Course Handbook for further detail.

Disclaimer

The University of Portsmouth has checked the information given in this Programme Specification Supplement. We will endeavour to deliver the course in keeping with this Programme Specification Supplement; however, changes may sometimes be required arising from annual monitoring, student feedback, review and update of units and courses. Where this activity leads to significant changes to units and courses, there will be prior consultation of students and others, wherever possible, and the University will take all reasonable steps to minimize disruption to students. It is also possible that the University may not be able to offer a unit or course for reasons outside of its control, for example; the absence of a member of staff or low student registration numbers. Where this is the case, the University will endeavour to inform applicants and students as soon as possible. Where appropriate, the University will facilitate the transfer of affected students to another suitable course.

10. Faculty

Technology

11. Department

School of Energy and Electronic Engineering

Curriculum

12. Educational Aims

The course aims to equip students to work as engineers, at an advanced level, in the fields of telecommunications and data communications, digital modulation and coding, mobile and satellite systems, communication security, microwave and wireless Technology. In addition, and more generally:

- Provide a challenging and stimulating study environment.
- Develop a range of key skills by means of opportunities provided in the study units.

- Accommodate student needs in relation to maximising their career potential by enabling them to develop knowledge, understanding and skills in their chosen subject area.

Being an MSc course, students are encouraged and expected to be able to reach a level of competence and professionalism where they can effectively integrate their technical and non-technical knowledge to solve a range of problems of a complex nature.

The course enables students to develop both analytical and design skills across the range of subjects. This is achieved through theoretical studies alongside practical design projects and laboratory experiments. Students also become conversant with industrial practice and familiar with industrial strength analysis and simulation tools.

The course is accredited by the IET and meets the educational requirements for Chartered Engineer in full. Students who do not pass the final Individual Project at the first attempt, will not be deemed by the IET to hold an accredited degree.

13. Reference Points

- University of Portsmouth curricula framework
- The university policy on Key Skills
- The scholarship and research expertise of academic members of staff
- Framework for Higher Education Qualifications (FHEQ)
- National Qualifications Framework
- UK Standard for Professional Engineering Competence
- The QAA UK Quality Code for Higher Education
- QAA's Engineering Subject Benchmark and the Engineering Council's UK-SPEC

The core elements of the engineering benchmark, interpreted in the context of electronics and communication engineering, are:

- **Underpinning Science and Mathematics (US):** Comprehensive knowledge and understanding of scientific principles and methodology appropriate to electronic design and related disciplines, to enable appreciation of its scientific and engineering context, and to support their understanding of historical, current, and future developments and technologies; with particular reference to principles governing: analogue circuits and systems; digital and microprocessor systems, including hardware description languages; analogue and digital telecommunication systems; data communications and network systems; microwave systems. An awareness of developing technologies, Knowledge and understanding of mathematical principles and methods, mathematical and computer models appropriate to electronic design, and an appreciation of their limitations, with particular reference to methods required in analogue electronics, telecommunications and signal processing. The ability to apply and integrate knowledge and understanding of other engineering disciplines to support study of their own discipline, and the ability to apply them effectively in engineering projects.
- **Engineering Analysis (E):** Understanding of engineering principles and the ability to apply them to analyse key engineering processes and investigate new or emerging technologies; ability to identify, classify and describe the performance of systems and components through analytical methods and modelling techniques; ability to apply quantitative methods and computer software to electronic engineering problems and the ability to assess the limitations of particular cases; understanding of and ability to apply a systems approach to engineering problems in such areas as analogue circuits and systems; digital and microprocessor systems, including hardware description languages; analogue and digital telecommunication systems, network systems. Ability to extract data pertinent to an unfamiliar problem, and apply in its solution using computer based engineering tools when appropriate.
- **Design (D):** Creation and development of an economically viable product or system to meet a defined need and an ability to generate innovative design to fulfil new needs. Knowledge, understanding and skills to: identify constraints including environmental and sustainability limitations, health and safety and risk assessment issues; understanding of customer and user

needs; identify and manage cost drivers; use creativity and innovation; ensure fitness for purpose for all aspects of the problem and manage the design process. Wide knowledge and comprehensive understanding of design processes and methodologies and the ability to apply and adapt them in unfamiliar situations;

- **Economic, Social and Environmental Context (S):** Knowledge and understanding of commercial and economic context of engineering processes; knowledge of management techniques which may be used to achieve engineering objectives, sustainable development; awareness of the framework of relevant legal requirements including personnel, health, safety, and risk (including environmental risk) issues; the ability to make general evaluations of commercial risks through some understanding of the basis of such risks; extensive knowledge and understanding of management and business practices, and their limitations, and how these may be applied appropriately; understanding of the need for a high level of professional and ethical conduct in engineering.
- **Engineering Practice (P):** Solution of engineering problems to meet specified technical requirements as well as time and resource constraints. Knowledge of characteristics of particular equipment, processes, or products; extensive knowledge of materials and components; workshop and laboratory skills; engineering project management methods, including planning, monitoring, control and reporting; use of technical literature and other information sources; awareness of nature of intellectual property and contractual issues; understanding of appropriate codes of practice and industry standards; awareness of quality issues; ability to work with technical uncertainty; electronic design practices, including: electronic components and data sheets; use of laboratory instruments and equipment; pcb design, fabrication, assembly and test; design and proving of analogue and digital circuits, understanding of engineering practice and limitations, appreciation of new developments; ability to apply engineering techniques with consideration to commercial and industrial constraints.

The abbreviations in parentheses are used for cross reference purposes in the learning outcomes in 14.

14. General Learning Outcomes

Level 7

Master's degrees are awarded to students who have demonstrated:

- a systematic understanding of knowledge, and a critical awareness of current problems and/or new insights, much of which is at, or informed by, the forefront of their academic discipline, field of study or area of professional practice
- a comprehensive understanding of techniques applicable to their own research or advanced scholarship
- originality in the application of knowledge, together with a practical understanding of how established techniques of research and enquiry are used to create and interpret knowledge in the discipline
- conceptual understanding that enables the student:
 - to evaluate critically current research and advanced scholarship in the discipline
 - to evaluate methodologies and develop critiques of them and, where appropriate, to propose new hypotheses

Typically, holders of the qualification will be able to:

- deal with complex issues both systematically and creatively, make sound judgements in the absence of complete data, and communicate their conclusions clearly to specialist and non-specialist audiences
- demonstrate self-direction and originality in tackling and solving problems, and act autonomously in planning and implementing tasks at a professional or equivalent level
- continue to advance their knowledge and understanding, and to develop new skills to a high level

And holders will have:

- the qualities and transferable skills necessary for employment requiring:
 - the exercise of initiative and personal responsibility
 - decision-making in complex and unpredictable situations
- the independent learning ability required for continuing professional development

15. Learning Outcomes

A. Knowledge and Understanding of:

- A.1 Communication Systems Analysis
- A.2 Data Communications and Networking
- A.3 Microwave and Wireless Technology
- A.4 Digital Modulation and Coding
- A.5 Mobile and Satellite Systems
- A.6 Communication Security

B. Cognitive (Intellectual or Thinking) Skills, able to:

- B.1 Systematically use knowledge of communication systems principles and underlying mathematics as tools for solving problems
- B.2 Apply critically, knowledge and understanding of communication engineering, data communication and networking creatively to generate practical products, systems and services
- B.3 Advise and make judgments on the management of and strategic use of communication systems
- B.4 Evaluate and justify the various methodological approaches to digital system design and select appropriate strategies to meet defined needs
- B.5 Plan, conduct, interpret and report on experiments
- B.6 Plan, manage, undertake, evaluate, interpret and report on a significant project

C. Practical (Professional or Subject) Skills, able to:

- C.1 Use systematically standard and specialist measuring instruments in appropriate situations to acquire data for identified purposes
- C.2 Use systematically computer systems for simulation, analysis and presentation within defined problem domains
- C.3 Model electronic systems systematically using appropriate techniques and software
- C.4 Design, construct, test and evaluate systems applicable to electronic communications
- C.5 Prepare schedules for the systematic building of complex communication systems
- C.6 Use appropriate codes of practice, informed by legislation and best practice as they apply to communication systems

D. Transferable (Graduate and Employability) Skills, able to:

- D.1 Work effectively individually and in group settings to achieve set goals
- D.2 Communicate effectively in writing and through graphical representations in professional and academic settings
- D.3 Apply appropriate mathematical techniques in analysis and problem solving
- D.4 Assess problem domains and formulate appropriate problem solving strategies
- D.5 Build on previous experience in order to generalise
- D.6 Use appropriate information technology to handle text, data, simulation, design and testing

16. Learning and Teaching Strategies and Methods

In depth knowledge is acquired mainly through lectures, computer laboratory work and experimental laboratory work. Individual learning is supported by directed reading, study guides, tutorial questions, worked examples, and design problems. Practical design considerations are learned through lectures, practical exercises, simulations and project work.

Intellectual and analytical skills are mainly developed through lectures, supported by practical work, case studies and worked examples. The ability to apply knowledge creatively is acquired through design exercises and involves theoretical analysis, simulation and practical design. The ability to plan and manage laboratory work and project work is acquired through a range of practical laboratory and simulation exercises, together with the individual project.

Experimental work is used to develop skills in using laboratory instrumentation and design of electronic systems. Use is made of CAD systems to synthesise and evaluate complex designs.

The emphasis is generally on individual learning through self-management within the study programme and through planning, managing and reporting on project work. Mathematical techniques and familiarity with IT systems are fundamental to the nature of the course.

17. Assessment Strategy

Knowledge and understanding will be tested through unseen examinations, in class tests and coursework. Project work and laboratory work are assessed by observation and submission of reports.

Use is made of in class tests, examinations and coursework for assessing intellectual and analytical skills, together with submission of reports for practical and project work.

Laboratory work and simulation work are generally assessed by submission of reports and by observation.

The ability to achieve goals and communicate effectively is particularly assessed through project activities. Numerical skills are assessed through the mathematics content of units. IT skills are assessed as part of those units which include computing, CAD, and the presentation of reports.

18. Course Structure, Progression and Award Requirements

See [Unit Web Search](#)¹ for full details on the course structure and units

This is a 1 - or 3 - year programme depending on whether a student elects for full-time or part-time study. The course normally consists of 20 credit point units, where 20 credits represent 200 hours of study time and usually includes up to 48 hours of time-tabled activities. The course offers a total 180 credits for the MSc award and ends with a 60 credit individual project. A Postgraduate Diploma exit award requires 120 credits. A Postgraduate Certificate exit award requires 60 credits from the taught units. The individual project may be undertaken at the University or, given agreement on supervision arrangements, in UK industry.

F/T students study 3 units in teaching block 1 (TB1) from Sept.-Dec. and 3 units in TB2 from Jan. – May, followed by the MSc project from June-Sept. TB1 units' exam take place in Dec. and TB2 exams in June. P/T students study 3 units in year 1, one unit in TB1 and two units in TB2. In year 2, they study two units in TB1 and one unit in TB2. The project is done in year 3 from Sept.-Sept.

19. Employability Statement

- The course is aimed at the students who wish to undertake careers in the Communication Systems Engineering. The examples and case studies used in the course are all designed to increase the students' knowledge of the theory and practice of Communication Systems and hence enhance their employability
- The final project allows students to investigate a significant Communication Systems problem and propose results. This may (subject to availability) be industrial project.
- Seminars from experts in the field from academia and industry will, subject to availability, be arranged during the academic year and students will be encouraged to attend.
- All units have aspects which contribute to the development of employability skills and/or research skills for further study.

Course Management

20. Support for Student Learning

- The Course is managed by a Course Leader.
- Extensive induction programme introduces the student to the University and their course.
- Each student has a personal tutor, responsible for pastoral support and guidance.
- In addition to class tutorials, extra support is given to individual students via time tabled Drop-in tutorials.
- University support services include careers, financial advice, housing, counselling etc.
- The Academic Skills Unit (ASK).
- The Additional Support and Disability Advice Centre (ASDAC).
- Excellent library facilities.
- The University of Portsmouth has consistently been awarded an excellent rating for student support and guidance in a number of Quality Assurance Agency inspections.
- Student course and unit handbooks provide information about the course structure and University regulations etc.
- Feedback is provided for all assessments.

21. Admissions Criteria

A. Academic Admissions Criteria

Standard University rules apply and this will normally mean that candidates are in possession of an honours degree with at least a classification of 2.2 or equivalent and in a relevant discipline. All other qualifications or experience presented must be forwarded to the Admissions Tutor for a University of Portsmouth decision. English – IELTS 6 or TOEFL 550 (215 computer-based).

B. Disability

The University makes no distinction in its admissions policy with regard to disability and will endeavour to make all reasonable adjustments in order to make it possible for students to study at Portsmouth on a course of their choice.

22. Evaluation and Enhancement of Standards and Quality in Learning and Teaching

A. Mechanisms for Review and Evaluation

- Course Leader's Annual Standards and Quality Evaluative Review.
- Head of School's Annual Standards and Quality Evaluative Review.
- Unit and Course Level student feedback considered at Board of Studies.
- Unit Assessment Board consideration of student performance for each programme.
- Annual Standards and Quality Reports to Board of Studies, including consideration of Subject and Award External Examiner Reports.
- Periodic Programme Review.
- Student Representatives and Student/Staff Consultative Committees.
- National Student Survey.
- Staff Performance and Development Review.
- Peer Review and Development Framework.
- Faculty Learning and Teaching Committee.

B. Responsibilities for Monitoring and Evaluation

- Unit Co-ordinators for unit content and delivery.

- Course Leader for day-to-day running of course.
- Board of Studies with overall responsibilities for operation and content of course.
- Head of School.
- Associate Dean (Academic).
- Associate Dean (Students).
- Quality Assurance Committee.
- Unit, Award and Progression Board of Examiners.

C. Mechanisms for Gaining Student Feedback

- Student Representation on Board of Studies.
- Student Staff Consultative Committees.
- Unit and Course level student feedback questionnaires.
- University participates in external student surveys, e.g. National Student Survey (NSS), Postgraduate Research Experience Survey (PRES) and International Student Barometer (ISB).

D. Staff Development Priorities

- Academic staff undertake activities related to research, scholarship, teaching and learning and student support and guidance.
- Annual staff performance and development reviews match development to needs.
- Managers undertake a variety of management development programmes.
- All academic staff encouraged to seek Higher Education Academy membership.
- Support Staff are encouraged to attend short courses in areas such as minute taking, and specific IT packages.
- The School is an IET Academic Partner.

23. Assessment Regulations

The current University of Portsmouth academic regulations will apply to this programme (see [Assessment and Regulations²](#)).

24. Role of Externals

Subject External Examiners who will:

- Oversee unit assessment and usually attend Unit Assessment Boards
- Review unit assessment strategy
- Sample assessment artefacts
- Present report to Unit Assessment Boards

Award External Examiners (usually also a Subject External Examiner) who will:

- Oversee and attend Award/Progression Boards
- Scrutinise and endorse the outcomes of assessment
- Ensure that the standard of the award is maintained at a level comparable with that of similar awards elsewhere in the United Kingdom

² www.port.ac.uk/departments/services/academicregistry/qualitymanagementdivision/assessmentandregulations/

25. Indicators of Standards and Quality

A. Professional Accreditation/Recognition

The course is accredited for CEng under UK-SPEC by the Institution of Engineering and Technology (IET).

B. Periodic Programme Review (or equivalent)

Successful Periodic Programme Review 11 December 2012, confirming both fitness of purpose of curriculum and effectiveness of annual monitoring and review processes.

C. Quality Assurance Agency

QAA Higher Education Review, March 2015, judgements about standards and quality meet UK expectations (*for full report see [Higher Education Review of the University of Portsmouth, March 2015](#)*³).

D. Others

The School of Engineering is an IET Academic Partner
